

### The Fiberlink Advantage

Fiberlink is a trusted provider for software and business intelligence reporting for the mobile computing market. As macro level changes occur, Fiberlink is at the forefront of assuring our software functions properly and does in a timely fashion.

#### COMPREHENSIVE SECURITY

Enterprises can protect mobile devices—and the data they carry—from hackers, viruses, loss, theft, “data leakage” and many other hazards of mobile computing.

#### SIMPLE CONNECTIVITY

Mobile workers can connect quickly and easily to the internet and corporate networks from anywhere, using all types of wired and wireless networks.

#### LOW-COST ADMINISTRATION AND COMPLIANCE

Administrators can deploy, configure and manage security and connectivity services consistently across a global network, while ensuring compliance with enterprise policies.

### Software Visibility at the Endpoint

An automated software patch and update distribution service is already supported by MaaS360 software. Fiberlink now adds real-time inventory and pre-packaged updates for widely used third-party Windows® - compatible applications.

This enhanced service from Fiberlink helps organizations lower security risks and improve overall management of distributed information technology infrastructures.

### Service Coverage

The new service initially includes updates for the following:

- Adobe Flash Player
- Adobe Acrobat
- Adobe Reader
- Apple iTunes
- Apple QuickTime
- Java Runtime Environment
- Mozilla Firefox
- Nullsoft Winamp
- Real Networks RealPlayer
- Skype

## Features

- Extensive visibility and reporting features
- No additional software is required

## Benefits

- Reduced security vulnerabilities and risks
- Ability to stay current with latest software updates
- Software consistency
- Centralized Control and Review
- Visibility of current and standard software configurations
- Information on potential software interoperability issues
