

Secure Document Sharing with MaaS360®

Distribute and secure corporate documents on mobile devices

Securely Share and Manage Documents on Mobile Devices

Users continue to introduce new mobile devices into the workplace that enable greater levels of employee productivity. This trend is driving the need for organizations to find a new balance between IT and employee use of mobile data on their device. In addition to simplifying the delivery of email and mobile apps, enterprises must also securely share corporate documents with these devices to ensure that employees always have access to the right content and information, no matter where they are.

MaaS360 simplifies and secures the delivery of documents to mobile devices by providing an easy-to-use enterprise document catalog giving administrators the control they need and employees the access they demand.

- Enterprise document catalogs for iOS and Android devices
- Web-based management console
- Document lifecycle management
- Document-specific sharing restrictions
- MaaS360 Doc Cloud

MaaS360 for Securing and Sharing Documents

With MaaS360 it's easy to set up and control how documents are distributed and managed, allowing employees to work on the go while protecting corporate information. The use cases are endless:

- Distribute quarterly financial documents to the Board of Directors.
- Update the product and marketing materials in real-time for sales teams so they don't need to scramble to find the latest datasheet or competitive information.
- Share company-wide information such as training materials, emergency information and HR policies.
- Ensure tablets in retail stores have the most up-to-date product and inventory information.

Best-in-Class User Experience

The Admin: MaaS360 provides in-depth reporting on documents, users and devices to monitor status and usage for compliance and operational reviews. With a few mouse clicks, IT can upload, distribute and review distribution stats on any corporate document

The End User: Users are alerted when new or updated content appears in their Doc Catalog without having to manually and continuously check for updates. The Doc Catalog allows users to browse and view documents in the most common content formats from Microsoft, Google, and Apple productivity suites, as well as PDF, web, video, image and audio files.

Secure Document Sync with MaaS360

Enterprise Document Catalog

The MaaS360 Document Catalog, part of the MaaS360 mobile app, is a simple and intuitive way for users to access, view, share, and edit documents on their iPad, iPhone or Android device. Documents are displayed with icons, descriptions and other details to ensure end users are always informed.

Web-based Management Console

MaaS360 provides administrators with a secure, web-based console for managing and distributing documents to end users. With MaaS360 you can easily add new documents to the master enterprise catalog, input custom descriptions of the document, set document security policy, and publish over the air to all devices, groups of devices or individual devices.

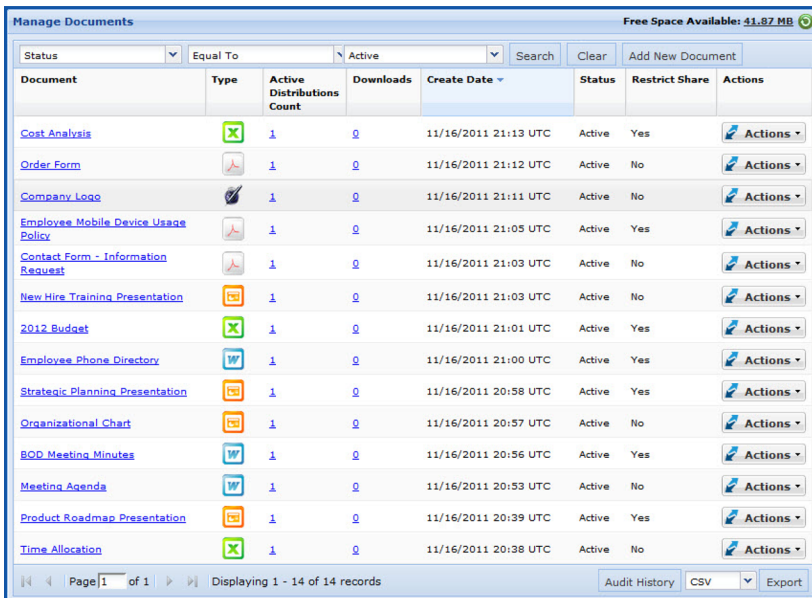

Document Lifecycle Management

Not only does MaaS360 allow the distribution of documents to devices, but it also allows you to send notifications and publish updates. Customizable end user messaging provides a simple mechanism to ensure that users are informed when new documents are made available. You can also remotely wipe any distributed documents from devices.

Document Security and Controls

Documents can carry some of an organization's most vital and sensitive information. This information is often critical for employees to remain as productive as possible.

MaaS360 Document Management provides clear workflows to manage the master catalog of documents and determine which devices to distribute them to. You can set policies on a document-by-document basis that can restrict sharing of documents by sandboxing them inside the MaaS360 mobile app. The app utilizes native device encryption to ensure corporate data remains secure, and is only available for the intended use.

Document	Type	Active Distributions Count	Downloads	Create Date	Status	Restrict Share	Actions

MaaS360 Doc Cloud

A unique benefit of MaaS360 is the option for organizations to host and share their enterprise documents using MaaS360's Doc Cloud, a globally optimized distribution network.

The MaaS360 Doc Cloud reduces network load and increases performance for end users, delivering maximum scalability. This benefit helps to provide instant ROI. Organizations can also host documents on an internal system if desired.
